

=====

=====

=====

Read Me first before executing program

=====

=====

=====

1. Execute home\_main.py file.
2. After executing program you will see something like below interface

\*\*\*\*\*WELCOME\*\*\*\*\*

SELECT WHICH USER YOU ARE?

1. New User?
2. Existing User?

3. If you are existing user give 2 as input else give 1
4. If you selected Existing user then you must go to dataset file named 10000.txt and pick any user id with whom you want to login
5. If you selected new user then you must go give your either favorite artist name or favorite album name as input

NOTE:

=====

=====

1. song title of song id given as output of recommendation system is given in song\_data.csv

2. song\_data.csv is one of the input dataset to our project but due to file size constraints we can't upload that dataset on github

link for song\_data.csv is -

[https://static.turi.com/datasets/millionsong/song\\_data.csv](https://static.turi.com/datasets/millionsong/song_data.csv)

download it and save it in folder having home\_main.py file for successful execution
